

Update BookStack on RackCorp

- For RackCorp Web Hosting Platform Only -

1. Login to the hosted website shell using a local user, NOT a super user. the PHP version gets misdetected as superuser

2. cd /httpdocs/Bookstack

3. ls to verify folder contents. note artisan, composer.*, composer.phar

```
-bash-4.4$ ls -l
total 2900
-rw-r--r-- 1 12425 12425 1186 Nov 7 07:04 LICENSE

```

4. `git pull origin release && php composer.phar install --no-dev && php artisan migrate`

this is different to the web instructions, we add the php runtime and .phar due to the environment, otherwise command wont work

5. should see GIT run and do its changes, and then composer run and do its package installs. Any errors mean the command line is wrong for the environment, or the web documentation command line was used.

Installing dependencies from lock file

Verifying lock file contents can be installed on current platform.

Package operations: 16 installs, 33 updates, 6 removals

Cannot create cache directory /home/httpd/vhostmounts/local/2425/.composer/cache/files/, or directory is not writable. Proceeding without cache

- Downloading composer/package-versions-deprecated (1.11.99.4)
- Downloading voku/portable-ascii (1.5.6)
- Downloading phpoption/phpooption (1.8.1)
- Downloading graham-campbell/result-type (v1.0.4)

Package manifest generated successfully.

58 packages you are using are looking for funding.

Use the `composer fund` command to find out more!

> @php artisan cache:clear

Application cache cleared!

> @php artisan view:clear

Compiled views cleared!

* Application In Production! *

Do you really wish to run this command? (yes/no) [no]:

> yes

Nothing to migrate.

6. The install ends with caches being cleared, lets run them again according to the instructions

-bash-4.4\$ php artisan cache:clear

Application cache cleared!

-bash-4.4\$ php artisan config:clear

Configuration cache cleared!

-bash-4.4\$ php artisan view:clear

Compiled views cleared!

-bash-4.4\$

7. Verify version in application
