

# Двухфакторная аутентификация

Изначально веб-доступ поддерживает двухфакторную аутентификацию с использованием различных технологий, включая приложения TOTP, такие как Google Auth, а также Yubikey.

## Инструкции по аутентификации Google

Google Auth прост в использовании и настройке в UMS:

The screenshot displays the 'Settings' page of a web application. On the left is a dark sidebar with icons for Compose, Mail, Contacts, Cloud, Notes, Help, Calendar, Tasks, Settings (highlighted), Dark mode, About, and Logout. The main content area is titled 'Settings' and lists various options: Preferences, Folders, Identities, Responses, User info, Vacation, Junk, Cloud View, and 2-Factor Authentication. The '2-Factor Authentication' option is selected, showing a configuration panel. At the top of this panel, a notification from 'h2.mstcloud.com says' states 'Code OK' with an 'OK' button. The configuration includes an 'Activate' checkbox (checked), a 'Secret' field containing 'RH7EGGIUGEL5BMEM' with 'Hide secret' and 'Generate New Secret' buttons, and 'Recovery codes' (SNQJV, DQDJJ, DRSW, NFEXU) with a 'Hide recovery codes' button. A large QR code is displayed under the 'QR Code' section. Below the QR code, text instructs the user to scan the code with a TOTP app like 'google-authenticator', followed by a 'Save' button. At the bottom, a section for testing the PIN shows the server time (11 Oct 2022 7:59:53) and a 'Check code' button next to the input field containing '281759'.

281759 Check code

После настройки в UMS пользователь может сканировать QR-код своим телефоном с помощью мобильного приложения Google Authenticator, и для учетной записи пользователя автоматически настраивается новый вращающийся код.

При следующем входе в систему UMS пользователю предоставляется экран двухфакторной проверки после ввода имени пользователя и пароля.

**2-Factor Authentication Code:**

☐ Don't ask me codes again on this computer for 7 days
